Convert PFX to PEM and upload the certificate to Plesk

Export the Private Key:

```
openssl pkcs12 -in filename.pfx -nocerts -out key.pem
```

Remove the password from the SSL certificate (unencrypted is needed for plesk):

```
openssl rsa -in key.pem -out server.key
```

Export the certificate:

```
openssl pkcs12 -in filename.pfx -clcerts -nokeys -out cert.pem
```

Extract the CA Root:

```
openssl pkcs12 -in certificate.pfx -out certificate.cer -nodes
```
