

Creación de un certificado SSL para un dominio (ADMINISTRACION)

Compra del crédito

Accedemos a la nuestra cuenta de usuario en godaddy.com y procedemos a comprar el/los crédito/s para el certificado seguro.

En este caso disponemos de distintos tipos de certificados seguros:

- SSL Turbo Standard (**el que usaremos normalmente**).
- Multiple Domains (UCC). Para securizar varios dominios en un solo certificado.

The screenshot shows the GoDaddy SSL Certificates page. At the top, there's a banner with the text "The highest level of security available. A fraction of the cost." and "SAVE UP TO 90!". Below the banner, there's a section titled "Companies that use GoDaddy.com SSL Certificates include:" with logos for various companies like Jimmy Dean, Cold Stone, Lee, E-LOAN, NRA, hirebridge, and Jimmy's Bag. The main content is divided into two sections: "Standard SSL" and "Premium SSL ideal for eCommerce". Both sections show a "Standard Security Indicator" icon (a lock) and a "Your Personal Domain Name" field. The "Standard SSL" section has a "Single Domain" option for \$19.48/yr and a "Multiple Domains (UCC)" option for \$70.15. The "Premium SSL" section has a "Single Domain" option for \$77.94 and a "Multiple Domains (UCC)" option for \$155.90. Both sections include a "Compare Plans" button at the bottom. The left sidebar contains links for "MY PRODUCTS", "MY ACCOUNT", "MY RENEWALS & UPDATES", and "MY DOMAIN". The right sidebar contains sections for "About Our SSLs", "Customer Reviews", "FAQs", "24/7 Support", and "Other Security Products".

Managing Secure Certificates

Managing Your Secure Certificates

To view the details of a certificate, click the certificate name in the certificate list. To view or manage your existing or pending Secure Certificates, click [Manage Certificates](#).

Initial access to the Secure Certificate manager requires log in credentials. The type of credentials you choose will determine future log in requirements.

Purchasing Secure Certificates:

[Click here to purchase a Secure Certificate](#)

[Click here to purchase a Code Signing Certificate](#)

cts/accountlist.aspx?ci=13021&product=ssl

seleccionamos el crédito que queremos usar (por si tuviéramos varios tipos distintos disponibles) y pinchamos en Continue en el lado derecho de la pantalla.

Set up New Certificate

Choose from your available credit(s):

Credit Expires 5/4/2011

[Continue >](#)

Después pincyhamso en Manage Certificate para proceder a la instalación del mismo.

Creación del certificado

esto nos lleva a la pantalla de gestión de nuestros certificados, donde podemos gestionar nuestros certificados emmitidos, los créditos disponibles, y las peticiones en curso denegadas.

Aquí pinchamos en “request certificates” del certificado que queremos usar

En la siguiente pantalla nos pide que introduzcamos el CSR (este archivo debe ser enviado por el jefe de proyecto para poder hacer la petición). Dejamos las opciones como están.

Finaliza el proceso de petición. En este momento tenemos 2 opciones:

- Si el dominio está alojado en nuestra cuenta de godaddy, podemos obtener directamente los certificados (el del dominio y el CA root).
- Si el dominio está fuera. Godaddy envía un email al registrante del dominio pidiéndole que confirme que, efectivamente, es el dueño del dominio y que quiere activar el servidor seguro. Una vez se acepte ese email godaddy procederá a generar los ficheros del certificado.

Obtención de los ficheros de certificado

Una vez hecho todo el proceso volvemos a la pantalla principal de la gestión de certificados seguros y pinchamos en Certificates.

The screenshot shows the 'Pending Requests' section of the GoDaddy Secure Certificate Services. On the left, a sidebar lists categories: Certificates (12), Pending Requests (1), Denied Requests (3), Credits (1), and Folders. The main area shows a table with one row for 'www.dabrampos.com'. The table columns are: Nombre Común, Tipo, Estatus, and Fecha de. The row data is: www.dabrampos.com, Standard SSL, Pending, 05/05/2011. At the bottom, there is a copyright notice: 'Copyright © 2003-2010. All rights reserved. GoDaddy Privacy Policy'.

Una vez dentro pinchamos en el dominio que queremos y vamos a la pantalla del mismo. Pinchamos en download y elegimos el servidor del tipo Apache. Pinchamos en descargar y nos enviará un fichero .zip con el certificado y el CA root.

The screenshot shows the details for the 'www.uagalur.com' certificate. The left sidebar shows the same categories as the previous screenshot. The main area is divided into two sections: 'Certificate Contents' and 'Certificate Details'. The 'Certificate Contents' section lists: Common Name: www.uagalur.com, Organization: www.uagalur.com, Organization Unit: Domain Control Validated, and Serial Number: 1251230139910939 (04:71 FE 94:0B:DB:1B). The 'Certificate Details' section lists: Type: Standard SSL, Private Key Length: 2048 bits, Issuing Organization: Go Daddy, Valid From: 01/29/2010 14:03:34 GMT, Valid To: 01/29/2011 14:03:34 GMT, and Status: Current. A 'Download' button is visible in the toolbar above the details sections.

Esto es lo que pasamos a Jefe de proyecto para que lo instale en el servidor.
